EDUCATION

Kean University
M.S., Computer Science *Expected May 2028*
Relevant Coursework: Advanced Software Engineering (Git/GitLab version control), Software Assurance, Analysis of Algorithms

Kean University
B.S., Information Technology, Cybersecurity Option *May 2024*
Dean's List, Fall 2023; Relevant Coursework: IT Computer Security, Cyber Defense, Cyber Risk Management, Digital Forensics, UNIX/Linux Administration, Networking Essentials, Database Management Systems, Technical Writing

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, HTML, CSS, Shell
Frameworks & Libraries: React, FastAPI, Node.js, Fastify, Hono, Tailwind CSS, Vite, SQLAlchemy
Tools & Platforms: Git, GitLab, GitHub, GitHub Actions, Docker, UNIX/Linux, Claude API, REST APIs, WebSockets
Cloud & Databases: PostgreSQL, SQLite, Redis, Cloudflare Workers, DigitalOcean, systemd

EXPERIENCE

DeepSpace (Eudaimonic Inc.) Remote
Software Engineer Intern *Oct 2026 – Present*
- Develop, debug, test, and document software on the DeepSpace platform.
- Participate in weekly mentorship and code review with the CEO to improve code quality.

NJ Division of Consumer Affairs Newark, NJ
Administrative Assistant II *Aug 2024 – Present*
- Flagged and presented 5 to 8 suspected fraud cases per cycle to the Executive Director by spotting irregular patterns in licensing applications across multiple professional boards.
- Managed confidential PII across 50+ daily communications by enforcing data classification and access control procedures under NJ state government security policies.
- Maintained detailed audit trails and case logs documenting correspondence, regulatory decisions, and case actions to meet government compliance and documentation standards.

Kean University Union, NJ
Research Collaborator *Oct 2023 – May 2024*
- Engineered autonomous stock trading systems driven by natural language instructions using Transformer Neural Networks, Auto-GPT, Alpaca API, and ChatGPT-4; presented at ACM SIGCSE Technical Symposium 2024.
- Co-authored peer-reviewed research on autonomous AI systems, documenting methodology, experimental results, and architecture in a formal paper accepted at an international conference.

PROJECTS

Prime - AI Personal Assistant | *Python, FastAPI, Playwright, SQLite, SQLAlchemy, Alembic* Oct 2026 – Present
- Built a personal AI assistant in Python and FastAPI that triages about 100 emails per run from Outlook (Playwright) and Gmail (Gmail API), using the Claude API to extract deadlines, rank job postings, and draft replies.
- Designed human-in-the-loop safety so no email is sent without an approval record, enforced in code and covered by 400+ automated pytest tests.

SquadUp — Real-Time Multiplayer Application | *TypeScript, React, Vite, Tailwind CSS, Hono* Sep 2026
squadup.app.space
- Designed, built, and deployed a real-time app (TypeScript, React, Hono, Cloudflare Workers, Yjs) with live presence and chat, isolating each room's data through per-room server instances tied to a unique room code.
- Debugged a production-only issue where new users couldn't see existing players, because local hot-reload masked it; traced the root cause and fixed it by triggering peers to re-announce themselves.
